CEO's Foreword & Vision Statement

This Business Requirements Document (BRD) defines the complete specification for PayMedia's Enterprise CRM and Project Lifecycle Management System. It has been commissioned by and written for the benefit of our development team, executive leadership, and all internal stakeholders who will use, manage, and be accountable to this system.

As CEO, my fundamental requirement is simple: every customer engagement we undertake — from the moment a lead enters our pipeline to the day a completed project is handed over and beyond — must live, breathe, and be traceable in one single system. No spreadsheets. No email attachments. No version confusion. No lost documents. One system. One truth.

This document captures the full scope of what that system must do, drawing from our internal operational needs and benchmarked against the world's leading enterprise platforms — Salesforce, Microsoft Dynamics 365, ServiceNow, SAP CX, Oracle CX, and HubSpot Enterprise — to ensure we are not building below the standard that our business demands.

Requirements marked CORE are foundational to launch. Requirements marked ADDED have been identified through gap analysis and comparison with peer systems — they are not optional enhancements; they are requirements that comparable enterprises consider standard.

> **CEO Mandate**
> Every customer, every proposal, every contract, every project document, every conversation, every payment milestone, and every change request must be captured, versioned, and auditable within this platform. This is not a CRM. This is the operational backbone of PayMedia's client delivery machine.

1. Executive Summary & Scope

1.1 Purpose

This Business Requirements Document (BRD) defines the complete functional, technical, and operational requirements for PayMedia's Enterprise Customer Relationship Management (CRM) and Project Lifecycle Management System. It is the authoritative specification document for all design, development, testing, and delivery activities.

1.2 Business Problem Statement

PayMedia currently operates without a unified system to manage its complete client engagement journey. As a result, the organisation faces the following operational risks:

- Document fragmentation: Proposals, contracts, and project documents exist across email, shared drives, and individual devices with no version control.
- Communication gaps: Client conversations and meeting notes are not centrally logged, causing loss of institutional memory and accountability.
- Financial exposure: Payment milestones, PO tracking, and contract expiries are managed manually, creating revenue leakage and compliance risk.
- Legal risk: Contracts are amended without audit trails, creating disputes over which version governs the relationship.
- Visibility gaps: Management has no real-time view of pipeline health, project status, or financial exposure without manual reporting.
- Accountability deficit: There is no mechanism to attribute actions, decisions, or document changes to specific individuals with timestamps.

1.3 Solution Overview

PayMedia requires the development of a centralized, enterprise-grade CRM and Project Lifecycle Management platform that acts as the Single Source of Truth (SSOT) across all internal departments — Sales, Legal, Finance, and Project Delivery — covering the complete customer journey from lead generation through project completion and post-live support.

1.4 Scope Summary

In Scope	Out of Scope
Full customer lifecycle from lead to project completion	External customer billing / invoicing (ERP function, integration only)
All document types with version control and approval workflows	HR and payroll management
Communication logging and timeline view	Marketing campaign execution (email marketing platforms)
Payment milestone tracking and financial dashboards	Public-facing website or e-commerce
Role-based access for all internal teams	External third-party project portal (Phase 3+)
Reporting, dashboards, and audit compliance	Hardware procurement and IT asset management
Customer health scoring and relationship intelligence	Deep financial modelling (separate tool, integrated only)

2. System Architecture & Design Principles

2.1 Architectural Philosophy

The system must be designed on the following principles, drawn from enterprise CRM best practices established by Salesforce, Microsoft Dynamics 365, and ServiceNow:

Principle	Description	Rationale
Single Source of Truth	All data exists once and is referenced, not duplicated	Eliminates version conflict and data inconsistency
No-Delete Architecture	Records are archived/deactivated, never hard-deleted	Ensures complete audit trail and data recovery
Version-First Design	Every editable record type supports versioning natively	Prevents overwrite and protects legal integrity
Event-Driven Logging	Every system action triggers an immutable log entry	Supports compliance, dispute resolution, and accountability
Role-Aware Interface	UI adapts to user role — only relevant data and actions shown	Reduces cognitive load and enforces access control
API-First Architecture	All modules expose REST APIs before building the UI	Enables future integration without architectural rework
Notification-Driven Workflow	System proactively alerts stakeholders at every key event	Reduces manual follow-up and prevents missed milestones
Modular Scalability	Each module can be scaled, updated, or replaced independently	Protects long-term investment and supports evolution

2.2 Data Architecture

The system must be built on a unified, relational data model where all entities are interconnected. The core data hierarchy is:

- Organisation → Contacts → Leads → Opportunities
- Opportunity → Proposals → PO → Agreement → Project
- Project → Documents → Milestones → Payments → Communications
- All entities share: Created By, Modified By, Timestamp, Version, Status, Attached Files

Critical Data Rule

No entity in the system may be permanently deleted. All records must support deactivation, archival, and restoration. This is non-negotiable for legal and audit compliance.

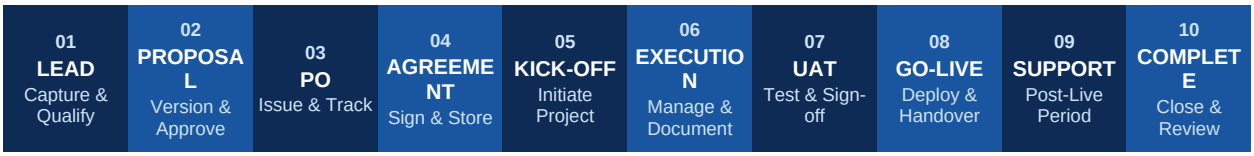
3. Complete Customer Lifecycle Map

The following diagram represents the complete customer journey that this system must support end-to-end. Every stage must be connected, traceable, and accessible from a single client record.



Stage	System Module	Key Outputs	Linked To
01 · Lead	Lead Management	Lead record, Scored & Qualified lead, Conversion	Organisation, Contact
02 · Proposal	Proposal Management	Versioned proposal, Approval, Client submission	Opportunity, Lead, Financial model
03 · Purchase Order	PO Management	PO record, Linked proposal version, Amendments	Proposal, Agreement
04 · Agreement	Contract Management	Signed contract, SOW, Renewal alerts, Amendments	PO, Project
05 · Kick-off	Onboarding Workflow	Kickoff document, Team assigned, Checklist completed	Agreement, Project
06 · Execution	Project Documentation	SRS, Architecture doc, Plans, Milestone tracking	Project, Payments, Resources
07 · UAT	Project Documentation	UAT Plan, Test results, Client sign-off	Project, Go-live doc
08 · Go-Live	Project Documentation	Go-live document, Handover, Completion report	Agreement, Payments
09 · Support	Support Module	Support tickets, SLA tracking, Issue resolution	Project, Client record
10 · Complete	Financial & Reporting	Final payment, Completion report, Health score	All modules

© 2026 PayMedia Technology Solutions. All rights reserved.

4. Functional Requirements — All Modules

4.1 Organisation & Contact Management

Foundation of the entire system. Every other record links back to an Organisation. This module must provide a complete 360-degree view of every client account.

MODULE 01 Organisation & Contact Management		
✓	Company profile: Legal name, trading name, registration number, address, industry, size	CORE
✓	Multiple contacts per organisation with unlimited contact records	CORE
✓	Contact role tagging: Decision Maker, Finance, Legal, Technical, Operations, Executive Sponsor	CORE
✓	Contact version tracking: Full history of changes to designation, phone, email, role	CORE
✓	Communication history per contact — linked to all interactions	CORE
✓	Attachment support: Contracts, NDAs, reference documents linked to organisation	CORE
✓	Activity timeline view — chronological feed of all activity on the account	CORE
✓	Advanced search and filter across all organisations and contacts	CORE
★	Account health score — visual indicator of relationship strength (Green/Amber/Red)	ADDED
★	Account tiering: Strategic, Key Account, Standard, Prospect — drives prioritisation	ADDED
★	Parent-child account relationships for group companies and subsidiaries	ADDED
★	Duplicate detection and merge capability to prevent fragmented records	ADDED
★	Account ownership assignment with transfer and history log	ADDED
★	Last interaction date tracker with automated alert if no contact in X days	ADDED
★	Key dates register: Contract anniversaries, renewal dates, review meetings	ADDED
★	Competitor tracking: Record which competitors are active on each account	ADDED
★	Relationship map: Visual diagram of contact relationships and influence levels	ADDED
★	Notes and pinned insights: Internal-only notes visible to account team	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.2 Lead Management

Captures all inbound and outbound sales opportunities at first contact. Provides structured qualification and routing to the opportunity pipeline.

MODULE 02 Lead Management		
✓	Lead creation: Manual entry and bulk CSV/Excel import	CORE
✓	Lead source tracking: Website, referral, campaign, direct, event, partner	CORE
✓	Lead scoring based on configurable criteria (industry, size, engagement, budget)	CORE
✓	Status workflow: New → Qualified → Proposal Sent → Won / Lost / Dormant	CORE
✓	Assignment to named sales personnel with workload visibility	CORE
✓	One-click conversion from Lead to Opportunity — preserving all lead data	CORE
✓	Communication log per lead: emails, calls, meetings	CORE
✓	Attachment support per lead	CORE
✓	Activity reminders and follow-up scheduling	CORE
★	Round-robin lead assignment with capacity rules	ADDED
★	Lead decay tracking: Flag leads with no activity after configurable period	ADDED
★	Lost reason capture: Mandatory when marking lead as Lost (Price, Timeline, Competitor, No budget, etc.)	ADDED
★	Lead re-engagement workflow: Dormant leads re-enter workflow on new activity	ADDED
★	Sales rep performance dashboard: Leads by rep, conversion rates, response times	ADDED
★	Source ROI tracking: Which lead sources produce highest conversion value	ADDED
★	Duplicate lead detection on creation	ADDED
★	Lead nurturing stage with follow-up sequence logging	ADDED

4.3 Opportunity Management (NEW MODULE — Missing from Original Brief)

Gap Identified

The original brief moves directly from Lead to Proposal. Enterprise CRM systems universally include a distinct Opportunity module between Lead and Proposal. An Opportunity is a qualified lead with defined scope, budget, and stakeholders — before a formal proposal is created. This is a critical missing layer.

MODULE 03 Opportunity Management		
★	Opportunity record created on lead conversion — separate from proposal	ADDED
★	Opportunity fields: Estimated value, probability %, expected close date, deal type	ADDED
★	Pipeline stage tracking: Qualification → Discovery → Solution Design → Proposal → Negotiation → Closed	ADDED
★	Multiple proposals can be created and linked to a single opportunity	ADDED
★	Competitor intelligence per opportunity: Which competitors are bidding?	ADDED
★	Win/loss analysis with structured outcome capture	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

★	Sales stage history: Full log of stage transitions with dates and responsible user	ADDED
★	Weighted pipeline value: Probability-adjusted revenue forecast per opportunity	ADDED
★	Opportunity team assignment: Multiple sales, pre-sales, and technical team members	ADDED
★	Approval required before converting opportunity to proposal (configurable)	ADDED
★	Linked discovery meeting notes and technical scoping documents	ADDED
★	Opportunity cloning: Duplicate for similar bids without re-entering data	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.4 Proposal Management with Version Control

Critical Requirement

No proposal shall ever be overwritten. All modifications create a new version. Previous versions remain immutable, accessible, and auditable at all times.

MODULE 04 Proposal Management		
✓	Create proposals linked to a CRM opportunity record	CORE
✓	Automatic version numbering: v1.0, v1.1, v2.0 — no manual overwriting	CORE
✓	Side-by-side version comparison to highlight changes between revisions	CORE
✓	Internal review comments and threaded discussion per proposal version	CORE
✓	Approval workflow: Draft → Internal Review → Approved → Sent to Client	CORE
✓	Status tracking: Draft / Under Review / Approved / Submitted / Revised / Accepted / Rejected	CORE
✓	Link to financial model and pricing data	CORE
✓	Attachment support: BoQ, SOW, technical specifications, pricing schedules	CORE
★	Proposal template library: Pre-built templates by service type, sector, or deal size	ADDED
★	Configurable approval chains: Single approver or multi-level (e.g., Sales → GM → CEO above threshold)	ADDED
★	Approval delegation: Auto-route to delegate when primary approver is absent	ADDED
★	Proposal expiry date with automated client reminder and internal alert	ADDED
★	Proposal covering letter generator: Auto-populate client name, deal specifics	ADDED
★	Revision request workflow: Client can formally request revision with reason captured	ADDED
★	Acceptance capture: Record client acceptance method (email, signed doc, verbal with note)	ADDED
★	Proposal analytics: Time in each stage, number of revisions, win rate by proposal type	ADDED
★	Clone proposal: Duplicate winning proposals for similar opportunities	ADDED
★	Linked competitor proposal positioning: Internal notes on how proposal addresses competition	ADDED

4.5 Purchase Order Management

MODULE 05 Purchase Order Management		
✓	Upload and store PO documents with full metadata	CORE
✓	Record PO value, currency, issue date, and payment terms	CORE
✓	Version and amendment tracking — every revision logged with previous version retained	CORE
✓	Link PO to the corresponding approved proposal version	CORE
✓	Status management: Issued / Amended / Partially Used / Closed / Cancelled	CORE
✓	Automated PO expiry alerts with configurable lead time	CORE

© 2026 PayMedia Technology Solutions. All rights reserved.

★	Multi-currency PO support with exchange rate capture at time of issue	ADDED
★	PO line-item detail: Individual line items with values, descriptions, and quantities	ADDED
★	PO utilisation tracking: How much of PO value has been invoiced vs. remaining	ADDED
★	PO vs. Agreement cross-reference validation: Alert if PO value differs from contracted amount	ADDED
★	PO amendment reason capture: Mandatory note when raising amendment	ADDED
★	Automated notification to Finance and PM on PO receipt and amendments	ADDED
★	PO register view: All POs across all clients, sortable by value, status, expiry	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.6 Agreement & Contract Management

MODULE 06 Agreement & Contract Management		
✓	Store Master Service Agreement (MSA) and Statement of Work (SOW)	CORE
✓	Full version control with automatic versioning	CORE
✓	Redline comparison between contract versions	CORE
✓	Approval workflow for internal legal and executive sign-off	CORE
✓	Digital signature tracking: Signatory, date, and method recorded	CORE
✓	Contract expiry and renewal alerts with configurable advance notification	CORE
✓	Amendment tracking linked to parent agreement	CORE
✓	Project linkage: Contract connected to active project record	CORE
★	Legal clause library: Standard pre-approved clauses available for insertion	ADDED
★	Contract obligation tracker: Key obligations extracted and tracked against deadlines	ADDED
★	Governing law and jurisdiction field per contract	ADDED
★	Limitation of liability and payment terms summary fields	ADDED
★	Counterparty signatory tracking: Client-side signatory details and authority verification note	ADDED
★	Contract calendar: Visual view of expiry dates, renewal windows, and review dates	ADDED
★	Automated renewal workflow: Trigger internal review 90/60/30 days before expiry	ADDED
★	SLA terms capture: Response times, uptime commitments linked to support module	ADDED
★	Sub-agreement support: Link addendums, schedules, and exhibits to parent contract	ADDED
★	Contract health indicator: Flags contracts with no renewal action, missing amendments, or overdue obligations	ADDED

4.7 Client Onboarding Workflow (NEW MODULE — Missing from Original Brief)

Gap Identified

Leading CRM platforms (Salesforce, Microsoft Dynamics, ServiceNow) all include a structured post-contract onboarding workflow. The gap between signing a contract and beginning project delivery is where client relationships are most at risk. A structured onboarding module is required.

MODULE 07 Client Onboarding Workflow		
★	Onboarding checklist: Configurable template triggered on contract activation	ADDED
★	Task assignment with due dates and responsible owner per onboarding task	ADDED
★	Kickoff meeting scheduler: Integrated with calendar, attendees, agenda template	ADDED
★	Welcome communication template: Auto-generate and log welcome email/letter	ADDED
★	Internal team introduction: Assign account manager, PM, technical lead — client notified	ADDED
★	Credential and access provisioning tracking: Log all systems access granted to client team	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

★	Onboarding stage tracker: Not Started → In Progress → Complete	ADDED
★	Client contact confirmation: Verify and confirm client-side project team details	ADDED
★	NDA and pre-project documentation checklist	ADDED
★	Onboarding completion sign-off: Internal approval before project officially opens	ADDED
★	Time from contract signing to kickoff: Tracked KPI for management reporting	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.8 Project Lifecycle Documentation

Every project must maintain a complete, structured documentation workspace. All documents are individually version-controlled with independent approval workflows.

MODULE 08 Project Lifecycle Documentation		
✓	Structured project workspace created automatically on project activation	CORE
✓	Mandatory document types: Kickoff Document, Project Plan, Payment Plan, SRS, Technical Architecture, UAT Plan, UAT Sign-Off, Go-Live Document, Handover Document, Project Completion Report	CORE
✓	Renegotiation Documents folder activated when change request is approved	CORE
✓	Per document: Version control, Approval workflow, Commenting, Change history, Attachments, Timestamp & user tracking	CORE
✓	Document status indicators: Not Started / Draft / In Review / Approved / Superseded	CORE
★	Project dashboard: Single-page view of all document statuses, milestone completion, payment status	ADDED
★	Document completion percentage: Visual progress bar per project and per document type	ADDED
★	Overdue document alerts: Flag documents not progressed within expected timeframe	ADDED
★	Cross-project document search: Find any document across all projects by keyword	ADDED
★	External sharing with expiry: Generate secure, time-limited link for client document review	ADDED
★	Document approval reminder: Automated nudge to approver after X days of inactivity	ADDED
★	Bulk document download: Download all documents for a project as a ZIP archive	ADDED
★	Project timeline view (Gantt-style): Milestones mapped to calendar with dependencies	ADDED
★	Issue log: Structured issue register with severity, owner, resolution, and closure	ADDED
★	Assumption register: Document project assumptions and validate against actuals	ADDED
★	Decision log: Record all key project decisions with rationale, date, and approver	ADDED
★	RAID register: Risks, Assumptions, Issues, Dependencies — project governance standard	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.9 Resource & Capacity Management (NEW MODULE — Missing from Original Brief)

Gap Identified

Enterprise platforms including Microsoft Dynamics 365, SAP CX, and Oracle CX all include resource management. Without it, the system cannot answer: 'Who is working on what, at what capacity, and is the team overloaded?' — a critical question for any project delivery organisation.

MODULE 09 Resource & Capacity Management	
★ Resource profile: Each user has skills, roles, cost rate, and availability configured	ADDED
★ Project team assignment: Assign internal staff to project with defined role and time allocation	ADDED
★ Capacity view: Visual calendar/grid showing resource utilisation across all projects	ADDED
★ Over-allocation alerts: Flag staff assigned beyond 100% capacity in a given period	ADDED
★ Resource request workflow: PM requests resource, Admin/Delivery Manager approves	ADDED
★ Planned vs. actual time tracking per project and per resource	ADDED
★ Billable vs. non-billable time classification	ADDED
★ Resource cost tracking: Internal cost of team against project budget	ADDED
★ Bench report: Resources currently unallocated and available for new projects	ADDED
★ Skill-based resource matching: Filter available resources by required skill set	ADDED

4.10 Risk Register (NEW MODULE — Missing from Original Brief)

Gap Identified

ISO 31000 project management standards and all enterprise delivery frameworks require a formal Risk Register. ServiceNow, Salesforce Project Management, and Microsoft Project all include risk management natively.

MODULE 10 Risk Register	
★ Project-level risk register: Log all identified risks per project	ADDED
★ Risk fields: Title, description, category, probability (1-5), impact (1-5), risk score (auto-calculated)	ADDED
★ Risk categories: Financial, Technical, Legal, Resource, Client, Regulatory, Third-Party	ADDED
★ Risk owner assignment: Named individual responsible for monitoring and mitigation	ADDED
★ Mitigation plan: Documented response strategy per risk	ADDED
★ Risk status: Open / Mitigating / Escalated / Closed	ADDED
★ Risk escalation workflow: Automatically escalate high-score risks to senior management	ADDED
★ Risk history: Full log of status changes and mitigation actions	ADDED
★ Portfolio risk view: Aggregate risk exposure across all active projects	ADDED
★ Risk review schedule: Configurable reminder to review risks on weekly/fortnightly	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

	basis	

© 2026 PayMedia Technology Solutions. All rights reserved.

4.11 Payment & Financial Tracking

MODULE 11 Payment & Financial Tracking		
✓	Configurable payment plan setup with milestone-based schedule	CORE
✓	Milestone payment tracking: Link each payment to a specific project deliverable	CORE
✓	Invoice upload and storage with metadata	CORE
✓	Payment status: Pending / Invoiced / Partially Paid / Paid / Overdue	CORE
✓	Revenue tracking dashboard: Actual vs. forecast	CORE
✓	Automated overdue payment alerts	CORE
✓	Linkage to PO and Agreement for cross-validation	CORE
★	Project budget configuration: Total contracted value, budget breakdown by phase	ADDED
★	Budget vs. actuals tracking: Planned cost vs. actual spend per project	ADDED
★	Margin tracking: Revenue minus internal resource costs = project margin	ADDED
★	Multi-currency support: Manage projects in different currencies with rate capture	ADDED
★	Revenue recognition schedule: Planned revenue by month for finance forecasting	ADDED
★	Credit note management: Log credit notes against specific invoices	ADDED
★	Payment receipt confirmation: Log when client payment confirmed received	ADDED
★	Aged receivables report: Outstanding invoices by age (0-30, 31-60, 61-90, 90+ days)	ADDED
★	Finance team notification: Automated alert to Finance on new invoice, payment, and overdue status	ADDED
★	Export to accounting format: CSV/Excel export compatible with ERP/accounting system	ADDED

4.12 Renegotiation & Change Management

MODULE 12 Renegotiation & Change Management		
✓	Change Request (CR) log with date, requester, description, and priority	CORE
✓	Financial impact analysis: Additional cost or credit from change	CORE
✓	Timeline impact analysis: Effect on project schedule and delivery date	CORE
✓	Revised proposal tracking linked to original opportunity	CORE
✓	Contract amendment tracking with version linkage	CORE
✓	Complete audit trail for every action	CORE
★	Change Request approval workflow: CR must be approved before work commences	ADDED
★	CR status workflow: Submitted → Under Review → Impact Assessed → Approved / Rejected → Implemented	ADDED
★	Client acknowledgement capture: Client must confirm receipt of CR and agreed terms	ADDED
★	Change cost vs. original contract: Cumulative change value tracked against base contract	ADDED
★	Change request template: Standardised CR form ensuring all fields are captured	ADDED
★	CR register: All CRs across all projects in one view, filterable by status and value	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

★	Email notification to all stakeholders on CR status change	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.13 Communication & Conversation Logging

MODULE 13 Communication & Conversation Logging		
✓	Email logging via server integration or manual capture with full threading	CORE
✓	Meeting notes: Structured entry with date, attendees, agenda, action items	CORE
✓	Call logs: Date, time, duration, participants, outcome, follow-up actions	CORE
✓	Internal discussions: Team-level communication linked to specific records	CORE
✓	Attachment support: Files shared in communications stored centrally	CORE
✓	Entity linkage: Every communication linked to Organisation, Project, Proposal, or Contract	CORE
✓	Chronological timeline view: Unified conversation history per entity	CORE
★	Omnichannel logging: Email, WhatsApp (via API), SMS, and phone all in one view	ADDED
★	Action item extraction: Flag and track action items arising from meetings	ADDED
★	Communication sentiment tagging: Internal note on tone of interaction (Positive/Neutral/Concerned)	ADDED
★	Response time tracking: Measure average response time per account/team member	ADDED
★	Unread communication alerts: Flag unanswered emails or unacted meeting notes	ADDED
★	Communication summary report: Monthly summary of all client touchpoints	ADDED
★	Email template library: Standard response templates for common scenarios	ADDED
★	Calendar integration: Meeting notes automatically linked to calendar event	ADDED
★	BCC-to-CRM: Forward any email to a unique CRM address to auto-log to correct record	ADDED

4.14 Customer Health & Relationship Intelligence (NEW MODULE — Missing from Original Brief)

Gap Identified

Salesforce Health Cloud, Microsoft Dynamics 365 Customer Insights, and Gainsight all provide customer health scoring. This is now considered a standard enterprise CRM capability. Without it, the CEO has no early warning system for accounts at risk.

MODULE 14 Customer Health & Relationship Intelligence		
★	Customer health score: Composite score based on payment behaviour, engagement, NPS, project progress, and issue frequency	ADDED
★	Health score components: Configurable weighting of factors that make up the score	ADDED
★	Health trend: Score trajectory over time (Improving / Stable / Declining)	ADDED
★	Traffic light status per account: Red (At Risk), Amber (Monitor), Green (Healthy)	ADDED
★	NPS / CSAT survey capability: Send satisfaction surveys at project milestones and capture results in client record	ADDED
★	Engagement frequency score: Tracks how often PayMedia is in contact with client decision-makers	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

★	Escalation flag: One-click flag to escalate account to senior management attention	ADDED
★	Health score alerts: Automated notification when score drops below threshold	ADDED
★	Account review scheduler: Trigger regular account review meetings based on tier	ADDED
★	Lifetime value tracking: Total revenue from client across all projects and contracts	ADDED
★	At-risk accounts report: Management view of all accounts trending negative	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.15 Post-Go-Live Support & Ticket Management (NEW MODULE — Missing from Original Brief)

Gap Identified

The original brief ends at project completion. However, every delivered system requires a post-go-live support period, often governed by SLAs in the contract. ServiceNow, Zendesk, and Freshdesk integrations are standard. The CRM must capture this phase or the customer lifecycle is incomplete.

MODULE 15 Post-Go-Live Support & Ticket Management	
★ Support period activation: Triggered on Go-Live sign-off with configurable duration	ADDED
★ Support ticket logging: Client-reported issues captured against project record	ADDED
★ Ticket classification: Bug, Enhancement request, Training query, Service request	ADDED
★ Severity levels: Critical (P1), High (P2), Medium (P3), Low (P4) with SLA response times per level	ADDED
★ SLA timer: Automatic countdown from ticket creation, breach alerts to manager	ADDED
★ Ticket assignment and escalation workflow	ADDED
★ Resolution log: Documented fix, workaround, or action taken per ticket	ADDED
★ Client communication thread per ticket: All correspondence logged	ADDED
★ Ticket status: Open → In Progress → Pending Client → Resolved → Closed	ADDED
★ Recurring issue detection: Flag if same issue raised more than once	ADDED
★ Support period expiry alert: Notify PM and Account Manager before support period ends	ADDED
★ Post-support renewal: If client requests extended support, trigger new agreement workflow	ADDED
★ Support summary report: Monthly ticket volume, resolution time, SLA compliance rate	ADDED

4.16 Knowledge Base & Document Template Library (NEW MODULE — Missing from Original Brief)

Gap Identified

Microsoft Dynamics, Salesforce, and ServiceNow all include native knowledge management. A template library prevents staff from creating documents from scratch, ensures consistency, and reduces errors — particularly important for legal and project documents.

MODULE 16 Knowledge Base & Document Template Library	
★ Document template library: Standard templates for all 10+ mandatory project document types	ADDED
★ Template versioning: Templates are version-controlled — updates don't affect documents in use	ADDED
★ Template access by role: Each role sees only templates relevant to their function	ADDED
★ Knowledge articles: Internal guides, process documentation, and best practice notes	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

★	FAQ and process library: How-to guides for common system tasks and business processes	ADDED
★	Search within knowledge base: Full-text search across all articles and templates	ADDED
★	Template usage analytics: Track which templates are most used and by whom	ADDED
★	Template approval workflow: New templates require approval before publishing	ADDED
★	Document generation: Create new project document from template — pre-populated with project data	ADDED
★	Custom clause library: Approved legal clauses for contracts and proposals	ADDED

© 2026 PayMedia Technology Solutions. All rights reserved.

4.17 Customer Self-Service Portal (NEW MODULE — Missing from Original Brief)

Gap Identified

ServiceNow, Salesforce Experience Cloud, and Microsoft Dynamics portals all offer client-facing self-service. This reduces inbound queries, improves client experience, and provides clients with transparent project visibility — a significant differentiator for PayMedia.

MODULE 17 Customer Self-Service Portal	
★ Secure client login: MFA-protected portal for client authorised users	ADDED
★ Project status view: Client can see project progress, milestone status, and document completion	ADDED
★ Document access: Client can view and download approved documents shared by PayMedia	ADDED
★ Document approval: Client can approve UAT sign-off and Go-Live documents via portal	ADDED
★ Invoice and payment view: Client sees invoices issued and payment status	ADDED
★ Support ticket submission: Client logs support tickets directly — linked to CRM automatically	ADDED
★ Communication thread: Client and PayMedia team communicate within ticket thread	ADDED
★ NPS/CSAT survey response: Client completes satisfaction surveys via portal	ADDED
★ Notification preferences: Client configures which project events trigger email alerts	ADDED
★ Portal access audit log: Every client login and action is recorded in CRM	ADDED
★ Access control: PayMedia controls exactly what each client user can see and do	ADDED
★ Phase 2 Feature: Proposal review and commenting via portal	ADDED

4.18 Notifications & Alerts Centre

MODULE 18 Notifications & Alerts Centre	
★ In-app notification centre: Bell icon with unread count — all alerts in one place	ADDED
★ Email notifications: All critical alerts sent via email with configurable frequency	ADDED
★ Notification categories: Task due, Approval required, Document overdue, Payment overdue, Contract expiry, SLA breach, Risk escalation, Health score alert	ADDED
★ User notification preferences: Each user configures which alerts they receive and by which channel	ADDED
★ Role-based notifications: Sales team gets pipeline alerts; Finance gets payment alerts; PM gets project alerts	ADDED
★ Management digest: Daily or weekly summary report to CEO/Directors of key metrics and alerts	ADDED
★ Escalation notifications: If alert is not actioned within threshold, escalate to manager	ADDED
★ Smart suppression: Avoid duplicate alerts — one notification per event, not repeated	ADDED
★ Notification log: Full history of all notifications sent, to whom, and whether read/actioned	ADDED

5. System-Wide Requirements

5.1 Version Management — Universal Policy

Non-Negotiable

Version control must be applied universally. No document, proposal, contract, PO, SRS, or project file may be overwritten. Every save on any document type creates a new version. This policy cannot be bypassed by any user role, including Admin.

Entity	Auto Version	No-Overwrite	Comparison	Change Log	Restore Previous
Proposals	✓	✓	✓	✓	✓
Contracts / Agreements	✓	✓	✓	✓	✓
Purchase Orders	✓	✓	—	✓	✓
SRS Documents	✓	✓	✓	✓	✓
Payment Plans	✓	✓	—	✓	✓
All Project Documents	✓	✓	✓	✓	✓
Contact Records	✓	✓	—	✓	✓
Opportunity Records	✓	—	—	✓	—

5.2 Audit & Compliance Requirements

Requirement	Specification	Rationale
User Activity Log	Every login, view, edit, create, delete-attempt, download, and approval logged with user ID, timestamp, and IP address	Legal compliance and accountability
Immutable Logs	Audit logs cannot be edited or deleted by any user — including Admin and CEO	Fraud prevention and legal integrity
Document Approval History	Permanent record of who approved what, when, in what version, including approvals given via delegation	Contractual and regulatory compliance
Download Tracking	Log every document download: user, timestamp, file name, version downloaded	Protects against unauthorized distribution
Field-Level Change Log	For critical fields (contract value, expiry date, signatory), record previous and new value with user and timestamp	Dispute resolution evidence
Session Logging	Log session start, end, duration, and pages/modules accessed per session	Security monitoring
Failed Access Attempts	Log and alert on repeated failed login attempts	Intrusion detection
Data Retention	All records retained for minimum 7 years in compliance with standard business document	Legal obligation

© 2026 PayMedia Technology Solutions. All rights reserved.

	retention requirements	
GDPR Compliance	Personal data handling, consent logging, data subject access, and right to erasure (for leads/contacts only, not contract signatories)	Regulatory compliance

© 2026 PayMedia Technology Solutions. All rights reserved.

6. Role-Based Access Control Matrix

The following matrix defines the exact permissions for each user role. The system must enforce these boundaries at the database level, not only the UI level.

Module / Feature	Sales	Legal	Finance	Project Mgr	Admin	Executive
Organisations & Contacts	Full	View	View	View	Full	View
Leads	Full	—	—	—	Full	View
Opportunities	Full	View	View	View	Full	View
Proposals	Create/ Edit	View	View	View	Full	View
Proposal Approval	Submit	Approve	—	—	Full	View
Purchase Orders	View	View	Full	View	Full	View
Contracts / Agreements	View	Full	View	View	Full	View
Contract Approval	—	Create/ Submit	—	—	Full	View
Project Workspace	View	View	View	Full	Full	View
Project Documents	View	View	View	Full	Full	View
Payment Plans	View	—	Full	View	Full	View
Invoices	—	—	Full	View	Full	View
Risk Register	—	—	—	Full	Full	View
Support Tickets	—	—	—	Full	Full	View
User Management	—	—	—	—	Full	—
System Configuration	—	—	—	—	Full	—
All Dashboards	Pipeline view	Contract view	Finance view	Project view	Full	Full
Audit Logs	—	—	—	—	Full	Full
Reports	Pipeline	Contract	Revenue	Project	All	All

KEY: Full = Create, Read, Update, Archive | View = Read-only | — = No access

© 2026 PayMedia Technology Solutions. All rights reserved.

7. Reporting & Analytics

The system must provide pre-built dashboards for each role, plus a custom report builder for ad-hoc analysis. All reports must be exportable to Excel and PDF.

Dashboard	Primary User	Key Metrics
CEO Executive Dashboard	CEO / Directors	Total pipeline value, Contracts expiring 90 days, Overdue payments, Project health summary, At-risk accounts, Revenue vs. forecast
Sales Pipeline	Sales Team / GM Sales	Leads by source, stage, and rep; Conversion rates; Win/loss ratio; Proposal submitted vs. approved; Monthly new opportunities
Revenue & Finance	Finance / CFO	Contracted revenue, Invoiced, Collected, Outstanding, Overdue by age, Monthly cash flow forecast, Project margin by account
Project Portfolio	Delivery Manager / PM	Active projects, Milestone completion %, Overdue documents, Resource utilisation, Risk summary, UAT and Go-Live status
Contract Intelligence	Legal / Compliance	Active contracts, Expiring contracts (30/60/90 days), Unresolved amendments, Contracts without digital signature, Pending approvals
Customer Health	Account Management / CEO	Health score by account, NPS trend, Engagement frequency, At-risk accounts, Lifetime value, Last interaction date
Support Operations	PM / Delivery Manager	Open tickets, SLA compliance rate, Average resolution time, Recurring issues, Tickets by severity and project
Audit & Compliance	Admin / CEO / Legal	User activity summary, Document download log, Approval history, Role access changes, Failed login attempts

7.1 Custom Report Builder

- Users with appropriate permissions must be able to build custom reports from any combination of fields
- Report filters: Date range, status, assigned user, organisation, project, module, amount range
- Grouping and aggregation: Group by any field; sum, count, average on numeric fields
- Scheduled reports: Reports auto-generated and emailed at configured frequency
- Report sharing: Reports can be saved, named, and shared with specific users or roles
- Visualisation: Bar charts, line charts, pie charts, and heat maps available on any data set

8. Technical Architecture Requirements

Requirement	Specification	Priority
Deployment	Cloud-hosted web application — browser-accessible without installation	Must Have
Architecture	Modular microservices — each module independently deployable and scalable	Must Have
API Layer	RESTful API for all modules — complete API documentation required	Must Have
Authentication	SSO (Single Sign-On) + MFA (Multi-Factor Authentication) mandatory	Must Have
Document Storage	Encrypted cloud storage (AES-256 minimum) — all files virus-scanned on upload	Must Have
Backup	Automated daily backup with point-in-time recovery — minimum 30-day retention	Must Have
Disaster Recovery	Documented DR plan — RTO (Recovery Time Objective) < 4 hours, RPO < 1 hour	Must Have
Availability	99.5% uptime SLA minimum — planned maintenance windows communicated in advance	Must Have
Scalability	System must support 5x current user and data volume without architectural change	Must Have
Mobile Responsiveness	Full functionality on tablet — key functions on mobile (notifications, approvals, view)	Must Have
Search	Global full-text search across all records, documents, and communications — results in < 2s	Must Have
Data Encryption	Encryption at rest (AES-256) and in transit (TLS 1.3+) — no unencrypted data storage	Must Have
Session Management	Configurable session timeout — maximum 8 hours, 30-minute idle timeout	Must Have
Logging Infrastructure	Centralised, tamper-proof log store — separate from application database	Must Have
Performance	Page load < 3 seconds; Report generation < 10 seconds; Search results < 2 seconds	Must Have
Browser Support	Chrome, Firefox, Safari, Edge — latest 2 major versions	Must Have

9. Integration Requirements

Integration	Phase	Purpose	Method
Email Server (SMTP/IMAP)	Phase 1	Auto-log inbound and outbound emails to client record	Email server API / BCC logging
E-Signature Platform (DocuSign / AdobeSign)	Phase 1	Digital signature collection and tracking for contracts	REST API
Accounting / ERP System	Phase 1	Sync invoices, payments, and financial data to/from ERP	REST API or CSV import/export
Calendar (Google / Outlook)	Phase 1	Sync meetings to CRM — auto-attach to client and project record	OAuth / Calendar API
Cloud Storage (Google Drive / SharePoint)	Phase 2	Mirror document repository for backup and external sharing	API integration
Project Management Tool (Jira / MS Project)	Phase 2	Sync project tasks, milestones, and status	REST API
WhatsApp Business API	Phase 2	Log WhatsApp communications to client timeline	Official WhatsApp Business API
BI / Analytics Tool (Power BI / Tableau)	Phase 2	Feed data to advanced analytics dashboards	ODBC / REST API
SMS Gateway	Phase 2	Send alerts and reminders to client and team via SMS	SMS API (Twilio or local)
Active Directory / SSO Provider	Phase 1	Single Sign-On for internal users	SAML 2.0 / OAuth 2.0

10. Gap Analysis — Benchmarked Against Leading Systems

The following table summarises requirements identified through gap analysis benchmarking PayMedia's original brief against Salesforce Sales Cloud, Microsoft Dynamics 365, ServiceNow CRM, SAP CX, HubSpot Enterprise, and Oracle CX.

Gap Area	Original Brief	Added Requirement	Benchmark Reference
Opportunity Module	Missing	Full opportunity module between Lead and Proposal	Salesforce, Dynamics, HubSpot
Client Onboarding	Missing	Structured onboarding checklist and workflow post-contract	ServiceNow, Salesforce Experience
Resource Management	Missing	Capacity planning, utilisation tracking, team allocation	Dynamics 365, SAP CX
Risk Register	Missing	Project RAID register with scoring, ownership, and escalation	ServiceNow, Oracle CX
Customer Health Score	Missing	Account health scoring with NPS, engagement, and trend	Salesforce, Gainsight, HubSpot
Post-Go-Live Support	Missing	Support ticket management with SLA tracking	ServiceNow, Zendesk, Freshdesk
Knowledge Base	Missing	Template library and internal knowledge management	Salesforce, ServiceNow, Dynamics
Customer Portal	Missing	Client self-service portal for project visibility and approvals	Salesforce Experience, ServiceNow
Notifications Centre	Missing	Centralised alert hub with role-based and user-configured alerts	All leading platforms
NPS / CSAT	Missing	Customer satisfaction surveys at project milestones	HubSpot, Gainsight, Salesforce
Custom Report Builder	Implicit	Explicit requirement for ad-hoc report creation by users	Salesforce, Dynamics, HubSpot
Budget vs. Actuals	Missing	Project cost tracking against contracted and budgeted values	Dynamics, SAP, Oracle CX
SSO	Missing	Single Sign-On for all internal users	All enterprise platforms
Multi-Currency	Missing	Support for projects in multiple currencies	Salesforce, Dynamics, SAP
Account Tiering	Missing	Strategic/Key/Standard/Prospect tier classification driving priority	Salesforce, HubSpot, Dynamics
Legal Clause Library	Missing	Pre-approved contract clauses reducing legal turnaround time	SAP, Oracle, Dynamics
Approval Delegation	Missing	Route approvals to delegate when primary approver is unavailable	All enterprise platforms
GDPR Compliance	Missing	Personal data management, consent,	All EU-compliant

© 2026 PayMedia Technology Solutions. All rights reserved.

		and erasure capability	platforms
Competitor Tracking	Missing	Log competitor activity and positioning per account and opportunity	Salesforce, HubSpot, Dynamics
Decision Log	Missing	Record key project decisions with rationale and approver	ServiceNow, SAP, Oracle

© 2026 PayMedia Technology Solutions. All rights reserved.

11. Implementation Phasing

Implementation is recommended in three phases to manage risk, enable early value realisation, and allow user adoption before advanced features are introduced.

Phase	Timeline	Modules / Features	Outcome
Phase 1 — Foundation	Months 1–4	Organisation & Contact Management, Lead Management, Opportunity Management, Proposal Management, PO Management, Agreement Management, Communication Logging, Basic Notifications, SSO + MFA, Core Reporting Dashboards	Full sales and contract lifecycle operational. Team stops using spreadsheets for client data.
Phase 2 — Project Delivery	Months 4–7	Client Onboarding Workflow, Project Lifecycle Documentation (all 10 document types), Payment & Financial Tracking, Resource & Capacity Management, Risk Register, Renegotiation & Change Management, Customer Health Scoring, Enhanced Notifications, Integrations Phase 1 (Email, E-Sign, Calendar, Accounting)	Complete project delivery lifecycle operational. CEO has real-time project and financial visibility.
Phase 3 — Intelligence & Experience	Months 7–10	Post-Go-Live Support Module, Knowledge Base & Templates, Customer Self-Service Portal, Advanced Analytics & Custom Report Builder, Integrations Phase 2 (WhatsApp, BI, Cloud Storage, PM tools), NPS/CSAT surveys, Competitor Intelligence, Approval Delegation	System becomes proactive intelligence platform. Client experience elevated. Operational efficiency maximised.

12. Success Criteria & KPIs

The system will be formally accepted when all Phase 1 success criteria are met, and evaluated quarterly against Phase 2 and 3 KPIs.

KPI	Measurement	Target
Document Version Conflicts	Count of duplicate or conflicting document versions post-launch	Zero (0)
Proposal Overwrite Incidents	Proposals modified without new version created	Zero (0)
Audit Trail Completeness	% of system actions captured in audit log	100%
User Adoption — Phase 1	% of defined users logging in and completing tasks weekly	> 90% within 60 days
Lead Conversion Tracking	% of converted leads with complete opportunity record	100%
Contract Expiry Missed	Contracts that expired without renewal action or alert	Zero (0)
Overdue Payment Alert Accuracy	% of overdue payments flagged before Finance discovered manually	> 99%
Project Document Completion	% of mandatory project documents completed and approved by Go-Live	100%
SLA Compliance (Support)	% of support tickets responded to within SLA threshold	> 95%
CEO Dashboard Availability	CEO can view live pipeline, project, and financial data on demand	100% uptime
Search Performance	Time to return search results across all records	< 2 seconds
System Availability	Uptime excluding approved maintenance windows	> 99.5%
Security Incidents	Data breaches or unauthorised access events	Zero (0)
Customer Health Score Adoption	% of active accounts with health score calculated	100% within 90 days of Phase 2
Support Ticket Resolution	Average ticket resolution time within SLA	> 95% on-time

13. Glossary of Terms

Term	Definition
BRD	Business Requirements Document — this document. The authoritative specification of what the system must do.
SSOT	Single Source of Truth — the principle that every piece of data exists in one definitive location.
CRM	Customer Relationship Management — the system category this platform belongs to.
PO	Purchase Order — a formal document from a client authorising a specific purchase at a defined value.
SOW	Statement of Work — defines project scope, deliverables, timeline, and responsibilities.
SRS	Software Requirements Specification — detailed document of functional and non-functional system requirements.
MSA	Master Service Agreement — the overarching contract governing the entire client relationship.
UAT	User Acceptance Testing — client-conducted testing to validate that deliverables meet agreed requirements.
MFA	Multi-Factor Authentication — two-step identity verification for secure system access.
SSO	Single Sign-On — allows users to access the system using their existing corporate identity credentials.
RBAC	Role-Based Access Control — access permissions assigned based on the user's role, not the individual.
API	Application Programming Interface — allows two software systems to communicate and exchange data.
BoQ	Bill of Quantities — itemised list of project components, quantities, and unit costs.
ERP	Enterprise Resource Planning — integrated business management system (finance, operations, HR).
RAID	Risks, Assumptions, Issues, Dependencies — standard project governance register.
NPS	Net Promoter Score — customer loyalty metric measuring likelihood to recommend.
CSAT	Customer Satisfaction Score — post-interaction satisfaction measurement.
SLA	Service Level Agreement — contractual commitment to response and resolution times.
GDPR	General Data Protection Regulation — EU data privacy and protection framework.
RTO	Recovery Time Objective — maximum acceptable time to restore system after failure.
RPO	Recovery Point Objective — maximum acceptable data loss measured in time.
CR	Change Request — formal document requesting a change to agreed project scope or contract.
CORE	Feature from the original system brief — foundational and launch-critical.
ADDED	Feature identified through gap analysis — not in original brief but required for enterprise-grade system.
